Calling All Young Scientists: Shape the Future with IUVSTA

Be Part of a Global Network, Unlock Opportunities, and Elevate Your Scientific Journey

Are you ready to make a meaningful impact in the world of science? The International Union for Vacuum Science, Technique and Applications (IUVSTA) invites young, passionate scientists like you to join a community where supporting scientific innovation thrives. By “young”, we mean “young to the field of study”, which is also known as “early career”. As a rising star in your field, your energy, curiosity, and fresh perspectives are exactly what IUVSTA needs to keep forging new paths and advancing IUVSTA.

By becoming an active member of IUVSTA, you will gain access to an incredible network of fellow scientists, mentors, and professionals from across the globe. Collaborate with leading experts, exchanging ideas at international conferences, and building connections that will last a lifetime. These relationships not only offer support but also open doors to exciting collaborations and career opportunities that can accelerate your growth and broaden your horizons.

Participating in IUVSTA activities is more than just professional development, it’s also an experience filled with fun, discovery, and friendship. Whether attending workshops, presenting your research, or organizing events, you’ll find countless ways to engage with your peers in an inspiring and supportive environment.

Take this opportunity to boost your scientific profile, share your enthusiasm, and make your mark on the field.

We are now shaping this new group and providing it with support (funding) and autonomy to propose activities, events, and reach young scientists in a meaningful way. While general information about IUVSTA can be found at www.iuvsta.org, please reach out directly to freek.molkenboer@tno.nl to express your interest in being a part of the dynamically forming group.
